

Requirements Table

Student Project Portfolio & Showcase App

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall enable student teams to create showcase profiles containing abstract summaries, demo video links, and verified GitHub repository URLs.	High	Pass: Profile is published after GitHub URL validation. Fail: Invalid URL is accepted.	Provides a standardized way to showcase student projects.
FR-002	Functional	The system shall enable panel judges to view submitted project profiles and grade projects using predefined digital rubrics.	High	Pass: Judge can score all mandatory rubric criteria and submit. Fail: Incomplete evaluation can be submitted.	Ensures structured and consistent project evaluation.
FR-003	Functional	The system shall allow student teams to upload and manage multimedia project artifacts associated with their showcase profile.	Medium	Pass: Supported multimedia files can be uploaded and displayed. Fail: Unsupported file types are accepted.	Enables teams to provide supporting project demonstrations.
FR-004	Functional	The system shall enable the public to cast votes for eligible projects while preventing duplicate votes from the same verified user.	High	Pass: One verified user can cast only one vote. Fail: The same user can successfully vote more than once.	Prevents unfair or duplicate voting.
FR-005	Functional	The system shall display project rankings and leaderboard results based on valid judge scores and public votes.	High	Pass: Leaderboard updates correctly after valid scores/votes. Fail: Invalid votes affect rankings.	Provides transparent project rankings.
NFR-001	Nonfunctional — Performance & Security	The public voting and leaderboard calculations shall update in real-time with an API response latency under 300 ms.	High	Pass: API latency remains below 300 ms under simulated peak load and security requirements are met. Fail: Latency is ≥300 ms or security requirements are violated.	Ensures responsive and secure voting during peak usage.
NFR-002	Nonfunctional — Availability	The system shall maintain at least 99% availability during the annual project showcase period.	Medium	Pass: Measured availability is ≥99%. Fail: Availability falls below 99%.	Ensures continuous access for students, judges, and the public.

UML Use-Case Diagram

USE-CASE FLOW

Use Case: Create Showcase Profile

Primary Actor	Student Team
Goal	Create and publish a project showcase profile with an abstract summary, demo video link, and verified GitHub repository URL.
Preconditions	Student team has access to the application and the project information required for the showcase profile.
Postconditions	A valid showcase profile is published to the showcase catalog; an invalid GitHub repository URL is not accepted.

Main Success Scenario

1. The Student Team opens the project showcase profile creation option.
2. The system requests the project abstract summary, demo video link, and GitHub repository URL.
3. The Student Team enters the required project information and submits the profile.
4. The system validates the GitHub repository URL.
5. The system confirms that the repository URL is valid.
6. The system creates the showcase profile and publishes it to the showcase catalog.
7. The Student Team can view the published project profile.

Alternate Flow — Invalid GitHub Repository URL

- A1. At Step 4, the system detects that the GitHub repository URL is invalid or cannot be verified.
- A2. The system rejects the submission and displays a validation message.
- A3. The Student Team corrects the GitHub repository URL and resubmits the profile.
- A4. The flow returns to Step 4 of the Main Success Scenario.
